DETAILED ACTION

Specification

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 13-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Dai et al. U.S. (Publication no. 2003/0011847).

Regarding claim 13, Dai discloses the EADCM comprises: a multi-phase eye quality monitor (i.e., eye opening Y detector , eye opening X detector) operable to provide signal distortion measurements of an incoming electrical signal received at an equalization circuit 14 (figure 1).

Regarding claim 14, Dai discloses the EADCM comprises: CDR for retrieving clock signal from the incoming signal;

a first comparator path (i.e., eye open Y detect) thru decision circuit 15 for comparing a first portion of the incoming signal to a scanning reference, the first comparator path timed according to the clock signal from the clock recovery path;

a second comparator path (i.e., eye open Y detect) thru decision circuit 15 for comparing a second portion of the incoming signal to an optimal timing reference, the second comparator path timed according to the clock signal from the clock recovery path; and a difference accumulator for keeping track of the number of instances that respective outputs from the first and second comparator paths differ, as a measure of the eye quality (see Figure 1).

Regarding claim 15, Dai discloses the EADCM comprising: equalization circuit 14 is a distortion equalizer.

Regarding claim 16, Dai discloses in figure 18, the distortion equalizer 14 is a decision feedback equalizer DFE.

3. Claims 1-3, 5-12 and 17-20 are allowed.

Response to Arguments

4. Applicant's arguments that Dai does not disclose or suggest a dispersion compensator that includes both a multi-phase eye quality monitor and an equalizer circuit. However, as the rejection of claim 13, the EADCM is the combination of FFE 13, a multi-phase eye quality monitor and an equalization circuit 14.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
